Department of Information Technology

Report on ITM

Faculty Name: Ms. Saleha Butool

Year/Semester: III-II

Course: Distributed System

Adopted Teaching Methodology: Quiz

Date: 02-08-2022

Topic: Distributed Computing Architectures

Description:

A quiz is a mind game in which learners (as individuals or in teams) attempt to answer questions correctly. Quizzes are usually scored in points and many are designed to determine a winner from a group of participants. In an educational context, a quiz is sometimes used to assess learners. It often has fewer questions of lesser difficulty and requires less time for completion than a test. Quizzes can be used to introduce a new topic. This gives the teacher an instant idea of what learners already know about the topic. Quizzes can be used to revise learners' retention of previous lessons or at the end of a lesson. This allows the teacher to get feedback on learners' progression.

Here we are implemented with the topic Distributed Computing Architectures in **Distributed Systems** and the session was supervised by a Ms. Saleha Butool.

The outcome of the method is to have distributed architecture refers to a model where software components that reside on networked computers communicate and coordinate their actions to achieve a common goal. In this approach, computation tasks are divided among several machines rather than relying on a central server.
